

Instructions:

1. Click on File -> Make a copy

Include your IPO Chart with your code in Eclipse IDE: We will discuss and demonstrate this in the computer lab.

IPO CHART

Program name:	Chapter 4	
INPUT	PROCESS	OUTPUT
Hint: What will the user input?	Hint: What is the program going to do with the input information?	Hint: What will the screen display after user input?
GCD: Two integers entered by the user.	1. Get two integers from the user. 2. Use the Euclidean algorithm to repeatedly divide the first number by the second and find the remainder. 3. Replace the first number with the second number and the second number with the remainder. 4. Repeat until the remainder is zero. 5. The last non-zero divisor is the GCD.	Display the greatest common divisor of the two integers

Hailstone: A positive integer entered by the user	1. Get a positive integer from the user. 2. Display the current number. 3. If the number is even, divide it by 2. 4. If the number is odd, multiply it by 3 and add 1. 5. Repeat steps 2–4 until the number reaches 1. 6. Count the number of steps required to reach 1.	Display the Hailstone sequence and the total number of steps required to reach 1.
